

Linked Data and the Semantic Web: the Basics

Pieter Pauwels
LDAC Summer School
17 June 2019

Outline

1. Information exchange and the AEC industry
2. LBD in practice!
3. Some technical basics
4. Scaling up the graph
5. Exercises

Building Information Modelling

Building Life-cycle

Cover	1. Scope	5. Core data schemas	A. Computer interpretable listings	E. Examples
Contents	2. Normative references	6. Shared element data schemas	B. Alphabetical listings	F. Change logs
Foreword	3. Terms, definitions, and abbreviated terms	7. Domain specific data schemas	C. Inheritance listings	Bibliography
Introduction	4. Fundamental concepts and assumptions	8. Resource definition data schemas	D. Diagrams	Index

2.3.3 IfcAlarm
2.3.4 IfcAlarmType
2.3.5 IfcController
2.3.6 IfcControllerType
2.3.7 IfcFlowInstrument
2.3.8 IfcFlowInstrumentType
2.3.9 IfcSensor
2.3.10 IfcSensorType
2.3.11 IfcUnitaryControlElement
2.3.12 IfcUnitaryControlElementType
2.4 Property Sets
2.4.1 Pset_ActuatorPHistory
2.4.2 Pset_ActuatorTypeCommon
2.4.3 Pset_ActuatorTypeElectricActuator
2.4.4 Pset_ActuatorTypeHydraulicActuator
2.4.5 Pset_ActuatorTypeLinearActuation
2.4.6 Pset_ActuatorTypePneumaticActuator
2.4.7 Pset_ActuatorTypeRotationalActuator
2.4.8 Pset_AlarmPHistory
2.4.9 Pset_AlarmTypeCommon
2.4.10 Pset_ControllerPHistory
2.4.11 Pset_ControllerTypeCommon
2.4.12 Pset_ControllerTypeFloating
2.4.13 Pset_ControllerTypeMultiPosition
2.4.14 Pset_ControllerTypeProgrammable
2.4.15 Pset_ControllerTypeProportional
2.4.16 Pset_ControllerTypeTwoPosition
2.4.17 Pset_FlowInstrumentPHistory
2.4.18 Pset_FlowInstrumentTypeCommon
2.4.19 Pset_FlowInstrumentTypePressure
2.4.20 Pset_FlowInstrumentTypeThermom
2.4.21 Pset_SensorPHistory
2.4.22 Pset_SensorTypeCO2Sensor
2.4.23 Pset_SensorTypeCommon

7.2.3.3 IfcAlarm

► Natural language names

► Change log

7.2.3.3.1 Semantic definitions at the entity

▼ Entity definition

An alarm is a device that signals the existence of a condition or situation that is outside the boundaries of normal expectation or that activates such a device.

Alarms include the provision of break glass buttons and manual pull boxes that are used to activate alarms.

HISTORY New entity in IFC4

▼ Attribute definitions

#	Attribute	Type	Cardinality	Description	G
9	PredefinedType	IfcAlarmTypeEnum	?		X

▼ Formal Propositions

Rule	Description
CorrectPredefinedType	Either the <i>PredefinedType</i> attribute is unset (e.g. because an <i>IfcAlarmType</i> is associated), or the inherited attribute <i>ObjectType</i> shall be provided, if the <i>PredefinedType</i> is set to USERDEFINED.
CorrectTypeAssigned	Either there is no alarm type object associated, i.e. the <i>IsTypedBy</i> inverse relationship is not provided, or the associated type object has to be of type <i>IfcAlarmType</i> .

7.2.3.3.2 Inherited definitions from supertypes

▼ Entity inheritance

Goal of Linked Data in Construction

Toronto Oct. 2014
T. Liebich

Semantic web technologies (RDF & OWL) promise to enable linking building data across various sources

⇒ improved information exchange with sources outside the traditional BIM environments, additional to the already existing techniques

Different serializations of the same data model

ifcOWL ontologies available

Ifc2x_all_If.exp	not supported
IFC2X2_ADD1.exp	not supported
IFC2X2_FINAL.exp	not supported
IFC2X2_PLATFORM.exp	not supported
IFC2X3_Final.exp	IFC2X3_Final.owl / .ttl
IFC2X3_TC1.exp	IFC2X3_TC1.owl / .ttl
IFC4.exp	IFC4.owl / .ttl
IFC4_ADD1.exp	IFC4_ADD1.owl / .ttl

CLASSES

INDIVIDUALS

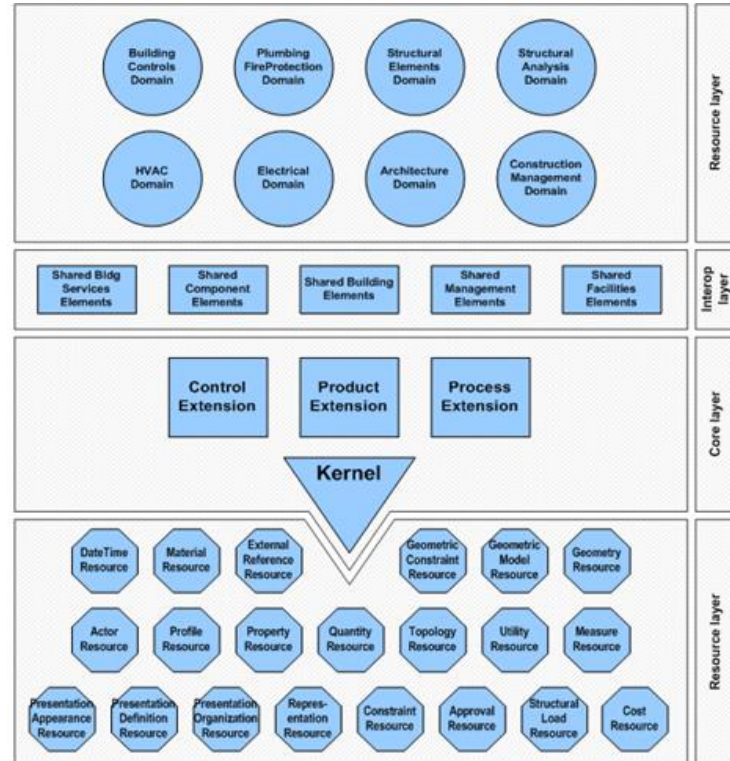

OBJECT PROPERTIES

Industry Foundation Classes (IFC)

There exists a standard, but:

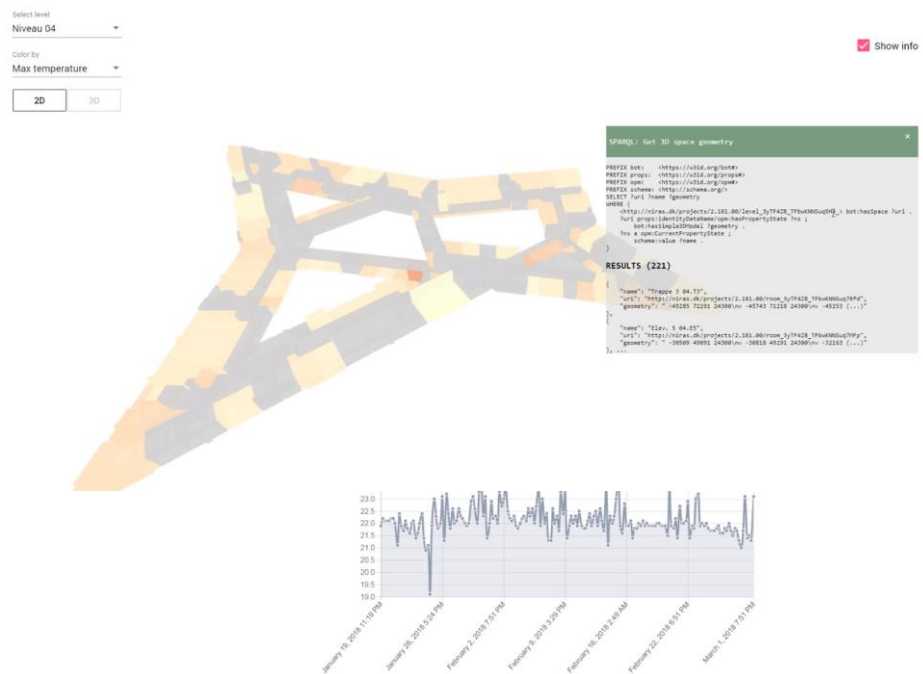

- not modular
- not extensible
- not simple enough to use
- AND not Web-compliant !

Outline

1. Information exchange and the AEC industry
2. LBD in practice!
3. Some technical basics
4. Scaling up the graph
5. Exercises

BOT + SOSA + geometry

Mads Holten Rasmussen, Christian Aaskov Frausing, Christian Anker Hviid Jan Karlshøj, Integrating Building Information Modeling and Sensor Observations using Semantic Web, Semantic Sensor Networks Workshop, https://youtu.be/P_38glvrbmg

Implementation @Gigantium Denmark - Combination with sensor data

Repo of 531 LBD building graphs

- 36 million triples in total
- 372 bot:Building instances
- 3,523 bot:Zone instances
- 2,117 bot:Space instances
- 615,452 bot:Element instances

Resource Description Framework

- RDF stands for Resource Description Framework
- RDF is a standard data model for describing web resources
 - Note: 'web resources' can make statements about anything in the real world: DBPedia, geography, building information, sensors, ... anything goes
- RDF is designed to be read and understood by computers **easily used**
- RDF is not designed for being displayed to people **not a file format, not a syntax, not a schema, ... => a data model**
- RDF is written in XML **usually**
- RDF is a W3C Recommendation -> **standardisation**

RDF Graphs, what are they?

RDF Graphs, what are they not?

Hierarchies (cfr. XML)

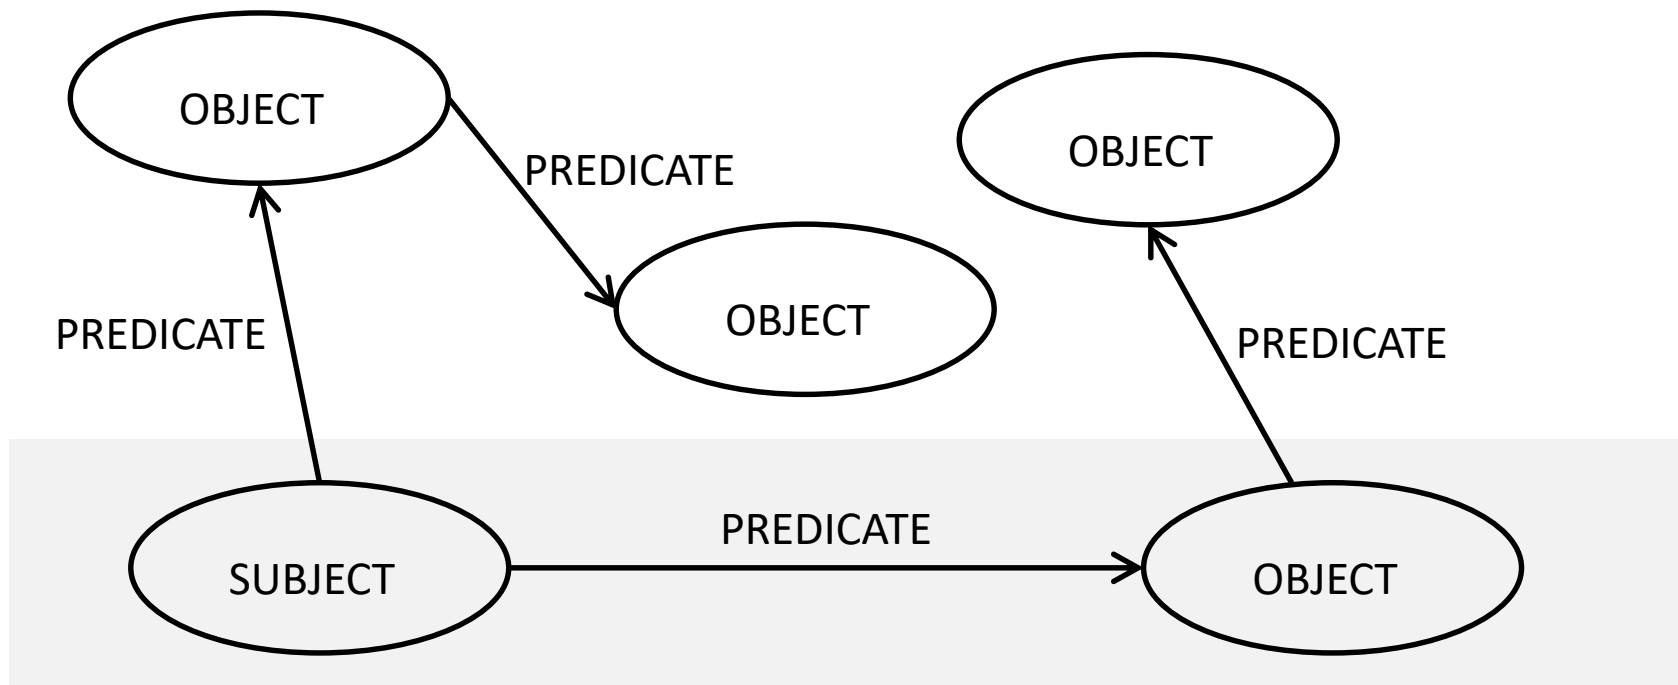

Relational databases (cfr. SQL)

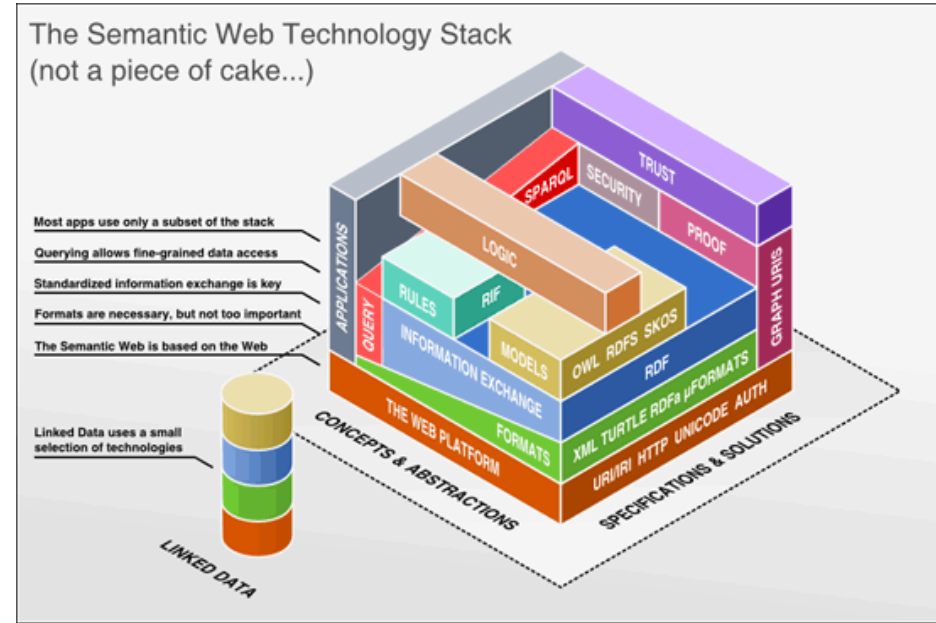

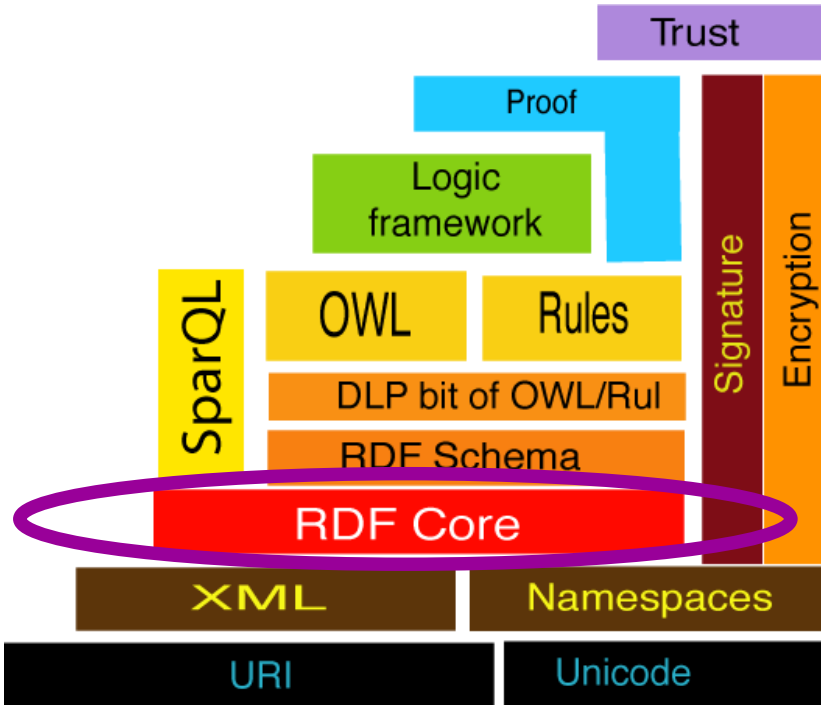

RDF graphs are
DIRECTED, LABELLED
GRAPHS

Connecting Triples

Example RDF graph

@prefix b: <http://www.beta-i.com/building#> .

@prefix c: <http://www.beta-i.com/city#> .

<http://www.beta-i.com/today#building_1>

b:hasRoom <http://www.beta-i.com/today#room_1> ;

b:hasName "Our course building";

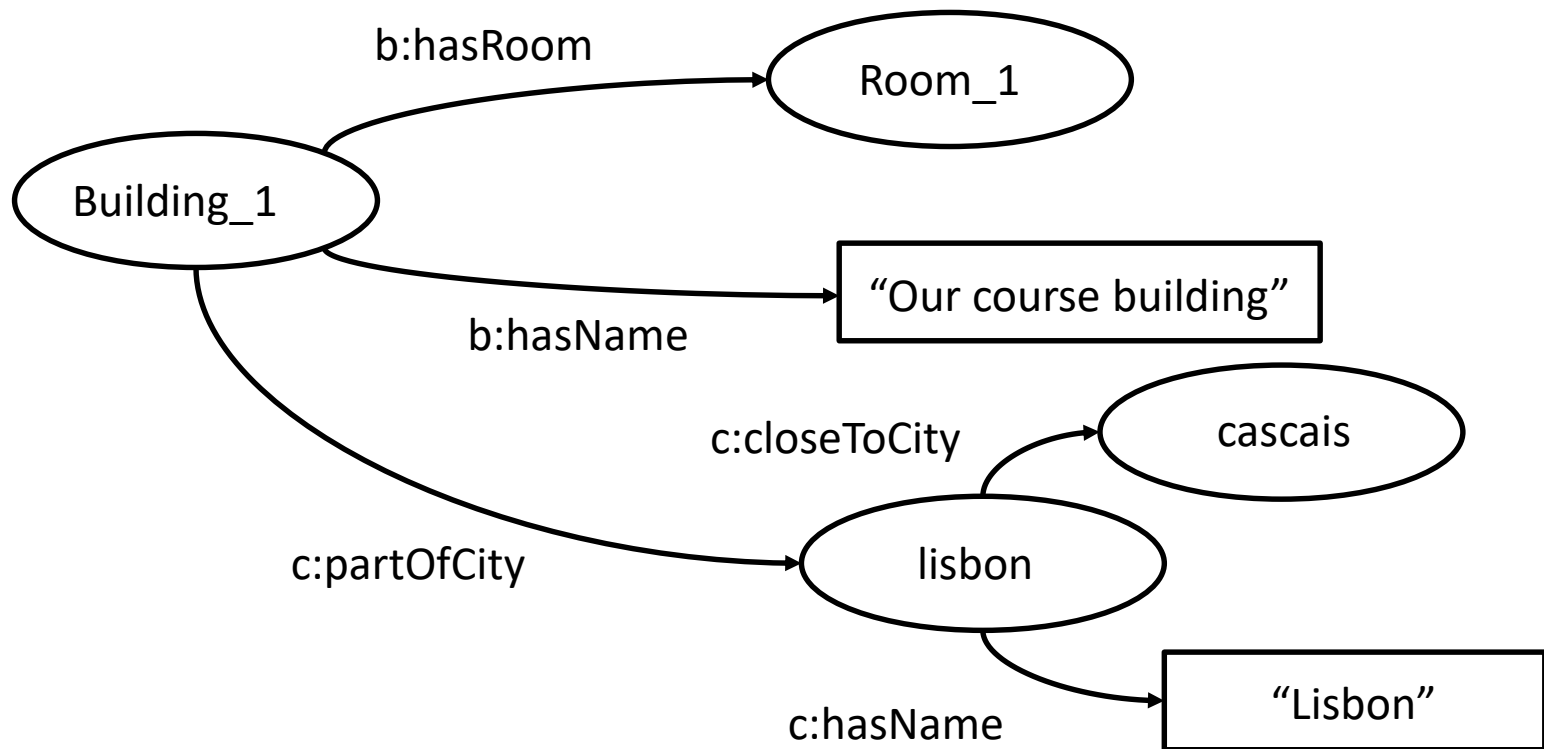

c:partOfCity <http://cities.com/#copenhagen> .

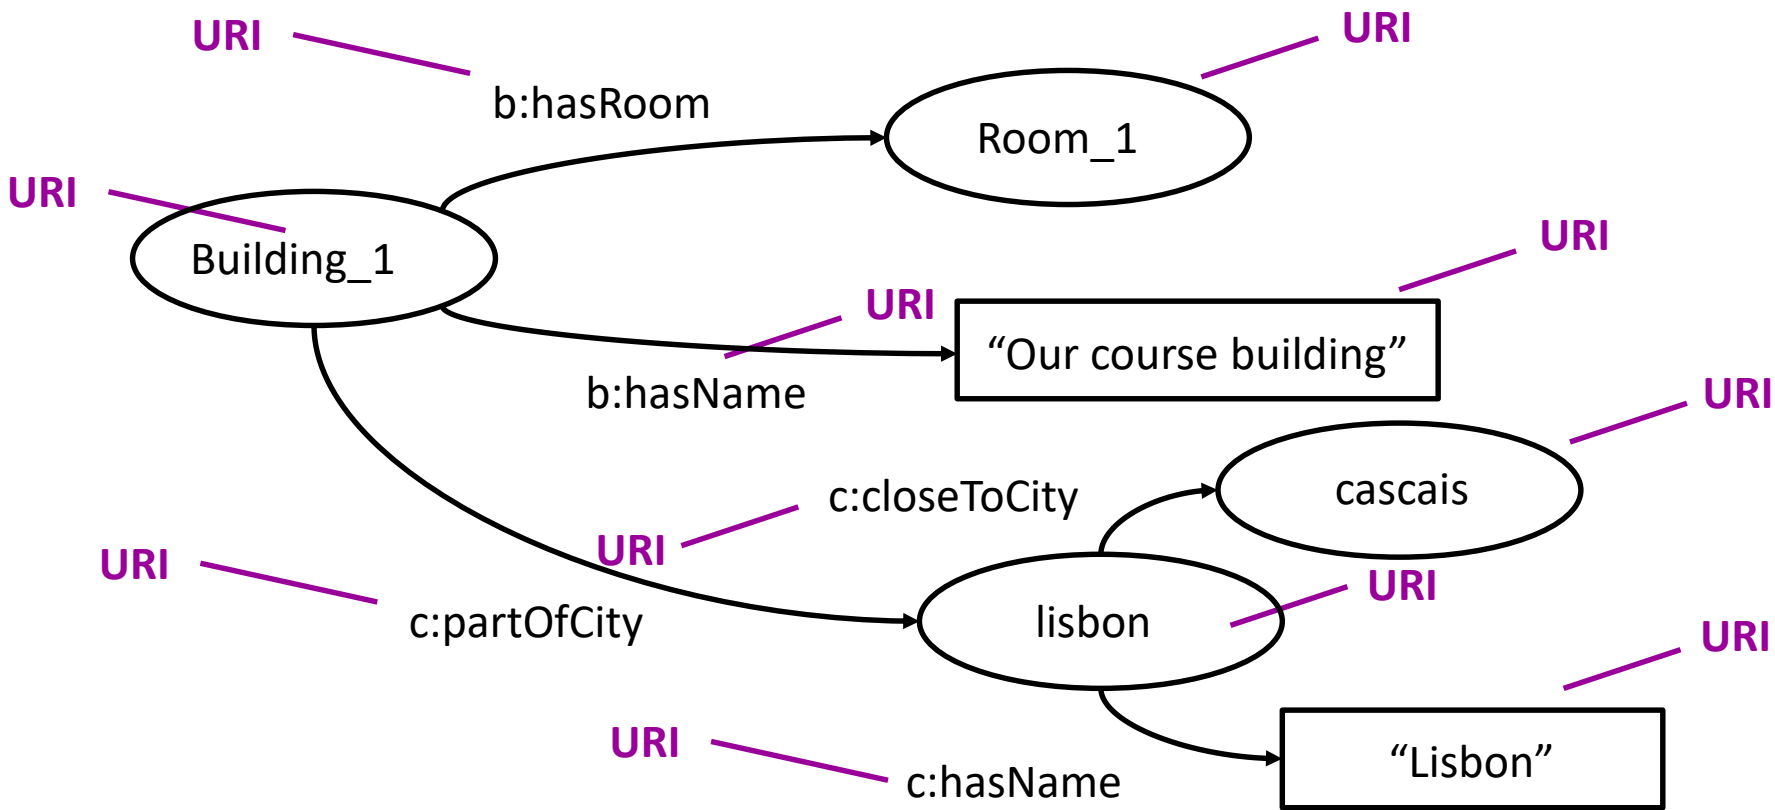

<http://cities.com/#copenhagen>

c:closeToCity <http://cities.com/#malmo> ;

c:hasName "Copenhagen" .

Example RDF graph

Uniform Resource Identifiers (URIs)

- URI stands for Uniform Resource Identifier
- Purpose: Obtain globally unique identifiers, so that information can be exchanged globally.
- Structure:

<http://www.beta-i.com/today#building_1>

Namespace

Name

Outline

1. Information exchange and the AEC industry
2. LBD in practice!
3. Some technical basics
4. Scaling up the graph
5. Exercises

Data integration now possible

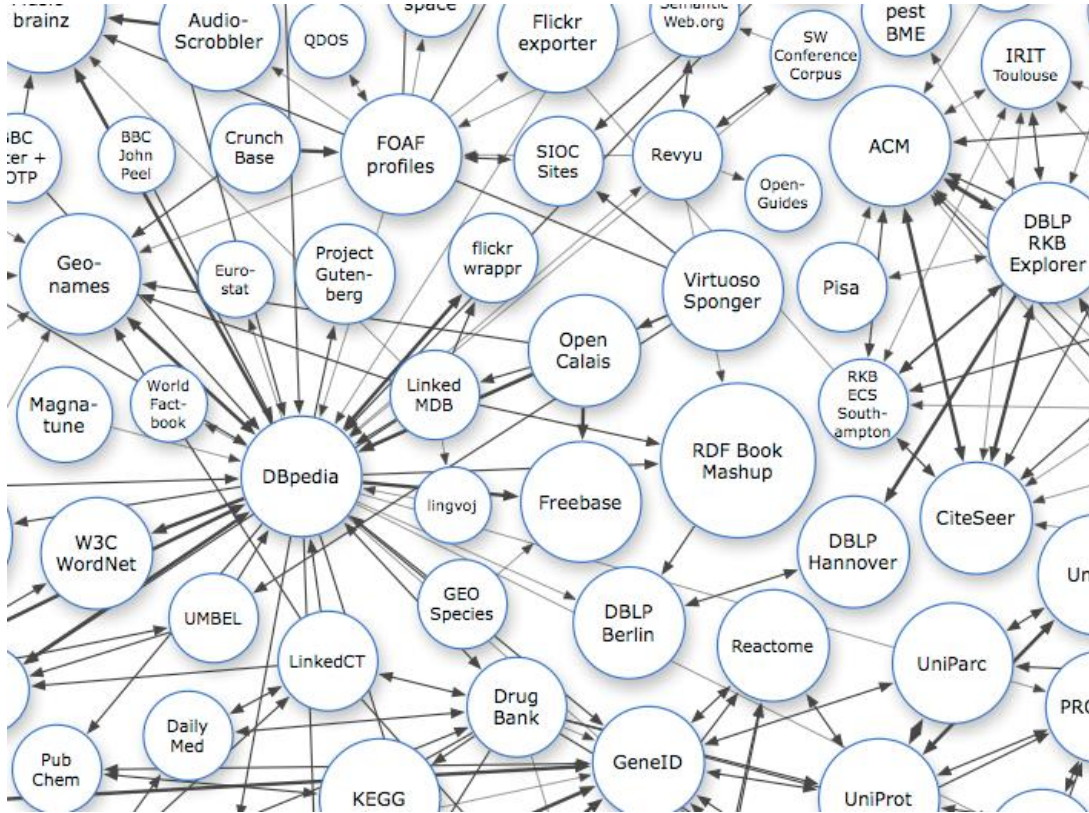

Main principles

- distributed / decentralised information management
- interactive information search and reasoning over the web
- sharing partial data

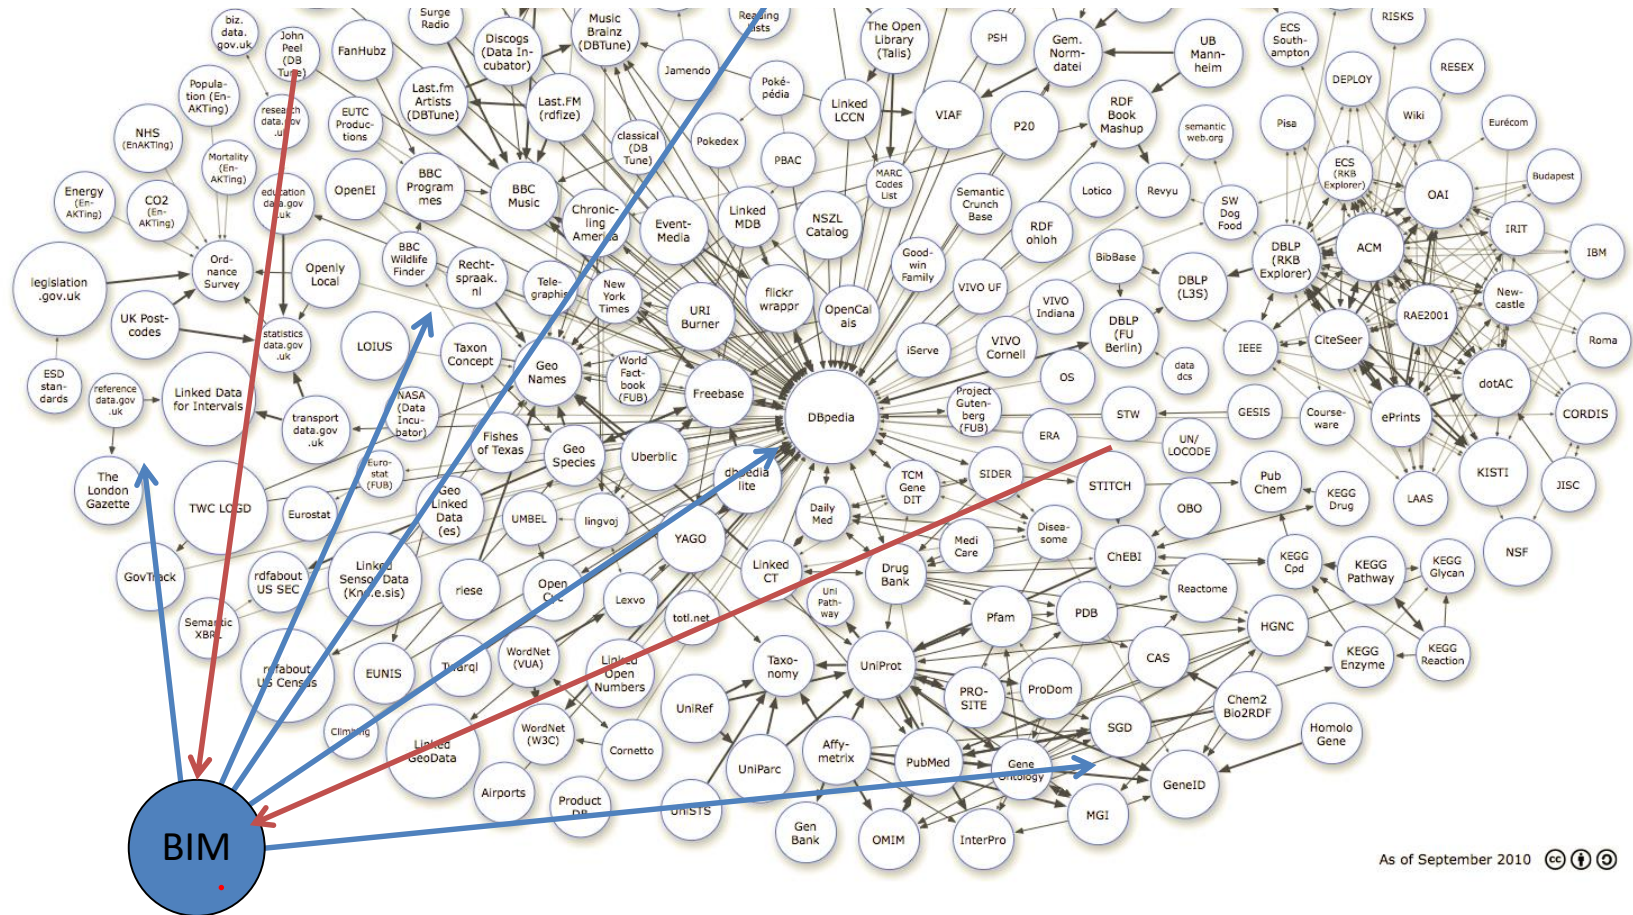

Linked Open Data cloud (LOD)

<http://tomheath.com/blog/2009/03/linked-data-web-of-data-semantic-web-wtf/>

Bring BIM into the Semantic Web

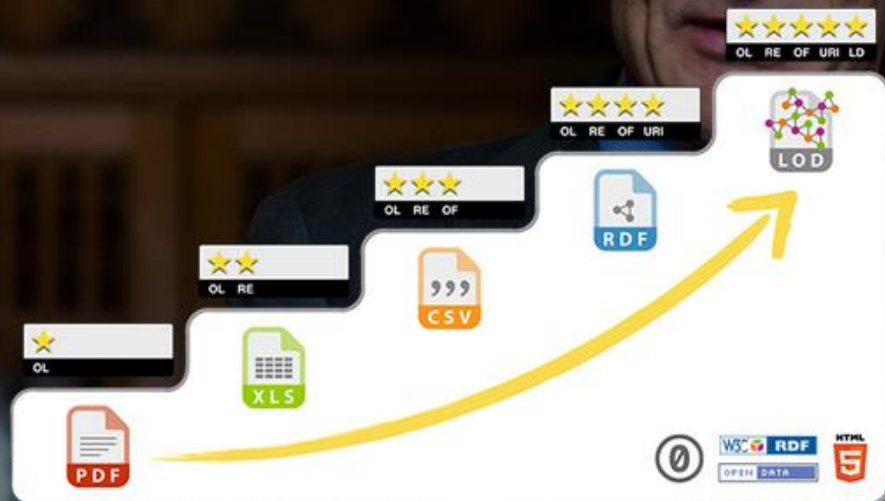

LOD cloud grouped per domain

5 ★ OPEN DATA

Tim Berners-Lee, the inventor of the Web and Linked Data initiator, suggested a 5-star deployment scheme for Open Data. Here, we give examples for each step of the stars and explain costs and benefits that come along with it.

BY EXAMPLE ...

Below, we provide examples for each level of Tim's 5-star Open Data plan. The example data used throughout is *'the temperature forecast for Galway, Ireland for the next 3 days'*:

- | | | |
|-------|--|-----------------------------|
| ★ | make your stuff available on the Web (whatever format) under an open license ¹ | example ... |
| ★★ | make it available as structured data (e.g., Excel instead of image scan of a table) ² | example ... |
| ★★★ | make it available in a non-proprietary open format (e.g., CSV as well as of Excel) ³ | example ... |
| ★★★★ | use URIs to denote things, so that people can point at your stuff ⁴ | example ... |
| ★★★★★ | link your data to other data to provide context ⁵ | example ... |

What else?

- Ontologies
- An ontology is a formal, explicit specification of a shared conceptualization

Abstract model
and simplified
view of some
phenomenon in
the world that we
want to represent

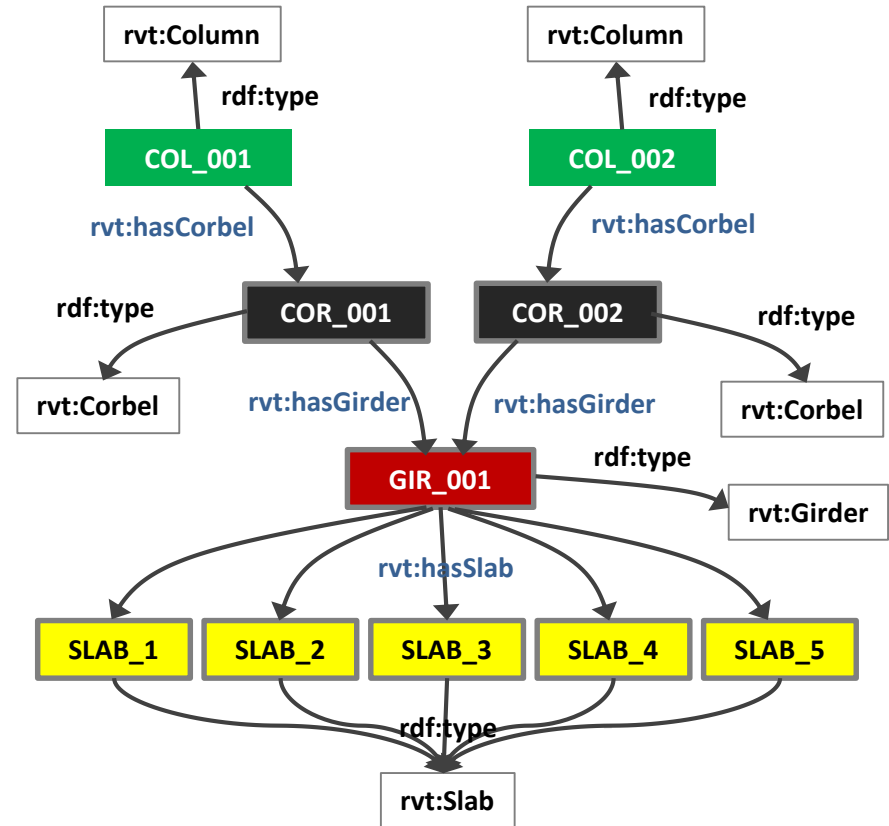

Machine-readable

Concepts,
properties,
relations,
functions,
constraints,
axioms

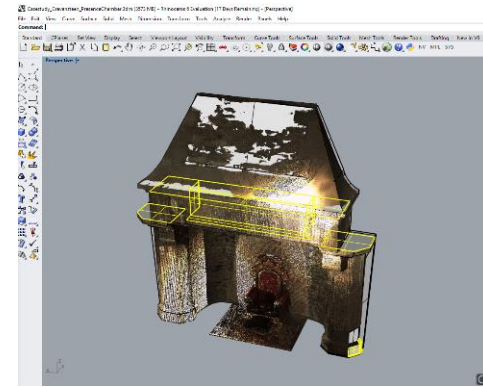

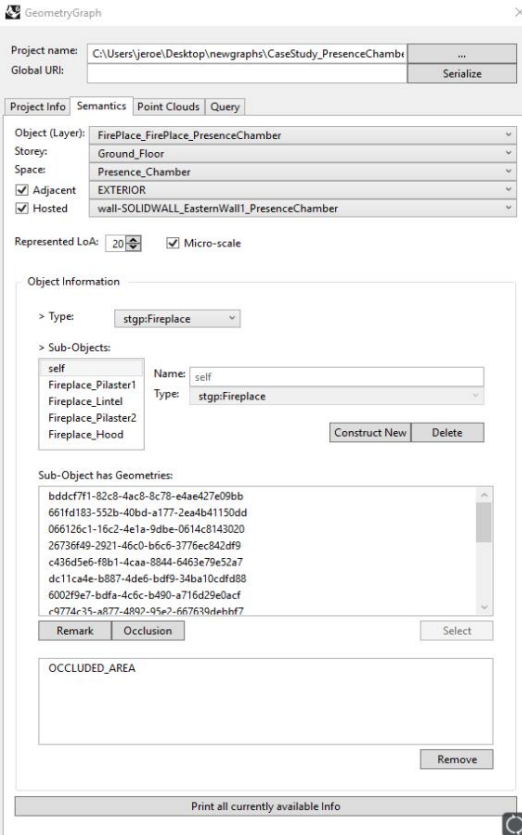

Consensual
knowledge

Standard vocabulary (1)

Choose your ontologies wisely
